

Test Plan

PARABANK PARASOFT TESTING

Prepared by: Rafia Haider

Date: 5/1/2026

1. INTRODUCTION

This Test Plan document outlines the testing strategy and approach for the Parabank web application. Parabank is a demo online banking application developed by Parasoft, designed to simulate core banking functionalities such as account management, fund transfers, bill payments, loan requests, and transaction tracking.

The purpose of this document is to define the scope, objectives, approach, and schedule for manual testing activities conducted on the Parabank application.

Application URL: <https://parabank.parasoft.com>

Version: 1.0

2. SCOPE

In Scope:

Manual functional black-box testing of the following 9 modules of the Parabank web application:

- User Registration
- Login/Logout
- Open New Account
- Accounts Overview
- Transfer Funds
- Bill Pay
- Find Transactions
- Update Contact Info
- Request Loan.

Out of Scope:

- Performance and load testing
- Security and penetration testing
- Mobile and responsive design testing
- Cross-browser testing (testing limited to Brave browser only)
- Backend and database level verification
- API testing
- Accessibility testing

3. TEST OBJECTIVES

The objectives of this testing effort are to:

- Verify that all 9 modules of the Parabank application function as expected under normal conditions
- Validate form fields, input validations, and error messages across all modules
- Ensure that core banking workflows such as fund transfer, bill payment, and loan request execute correctly end to end
- Verify that account balances and transaction records update accurately after financial operations
- Identify and document defects with sufficient detail for developers to reproduce and fix them
- Ensure that the application behaves consistently across positive, negative, and boundary test scenarios

4. TEST ENVIRONMENT

Parameter	Details
Application URL	https://parabank.parasoft.com
Browser	Brave Browser
Operating System	Windows 10
Test Management Tool	Microsoft Excel
Bug Tracking Tool	Jira
Test Type	Manual Functional Testing

5. TEST APPROACH

Testing will be conducted manually using a black-box approach, meaning the application will be tested from an end-user perspective without knowledge of the underlying code or architecture. Both positive and negative test scenarios will be covered. Boundary value analysis and equivalence partitioning techniques will be applied where applicable, particularly for numeric input fields such as transfer amounts and loan amounts. Defects identified during test execution will be logged in Jira with steps to reproduce, severity, and priority.

6. MODULES TO BE TESTED

#	Module
1	User Registration
2	Login / Logout
3	Open New Account
4	Accounts Overview
5	Transfer Funds
6	Bill Pay
7	Find Transactions
8	Update Contact Info
9	Request Loan

7. ENTRY AND EXIT CRITERIA

Entry Criteria:

- Parabank application is accessible and stable
- Test plan is reviewed and approved
- Test cases are written and ready for execution
- Jira project is set up with epics, user stories and sprints

Exit Criteria:

- All written test cases have been executed
- All critical and high severity bugs have been logged in Jira
- Test execution results are documented
- No critical severity bugs remain unresolved

8. ROLES AND RESPONSIBILITIES

Role	Name	Responsibilities
Test Lead	Rafia Haider	Test planning, test case design, test execution, bug reporting

9. DELIVERABLES

The following artifacts will be produced as part of this testing effort:

- Test Plan
- Requirement Traceability Matrix (RTM)
- Test Scenarios
- Test Cases with execution results
- Bug Reports in Jira

10. SCHEDULE

Activity	Duration
Test Planning	Day 1
RTM Preparation	Day 1
Test Case Writing	Day 2 - 3
Test Execution	Day 4
Bug Reporting	Day 4
Test Summary	Day 4

11. RISKS AND ASSUMPTIONS

Risks:

- Parabank is a demo application and may be reset or go down unexpectedly, causing loss of test data

- Some features may behave differently than a real banking application due to demo environment limitations
- No official requirements document (SRS/FRS) is available, test cases will be based on expected behavior and general banking knowledge

Assumptions:

- The Parabank application will remain accessible throughout the testing period
- Testing will be performed by a single tester
- Functional behavior will be inferred from the application UI and general domain understanding in the absence of formal requirements
